

Fifteen-year-old Pertussis Booster (1 dose) Coverage by Rural Planning Zone (RPZ)

Highlights

- Pertussis coverage in 2015 varied by rural planning zone (RPZ) (Figure 1).
- Rosthern and Area had the lowest pertussis booster coverage at 75.1%. This coverage may underestimate coverage of children on First Nations Reserves. See [About the Data](#). For coverage rates on First Nations Reserves see [First Nations and Inuit Health](#).
- Watrous and Area had the highest coverage at 90.9%.
- Table 1 shows the historical trend for pertussis booster coverage at 15 years by RPZ.

Figure 1: Fifteen-year-old Pertussis Booster (1 dose) Coverage Percent by Rural Planning Zone (RPZ), Saskatoon Health Region, 2015

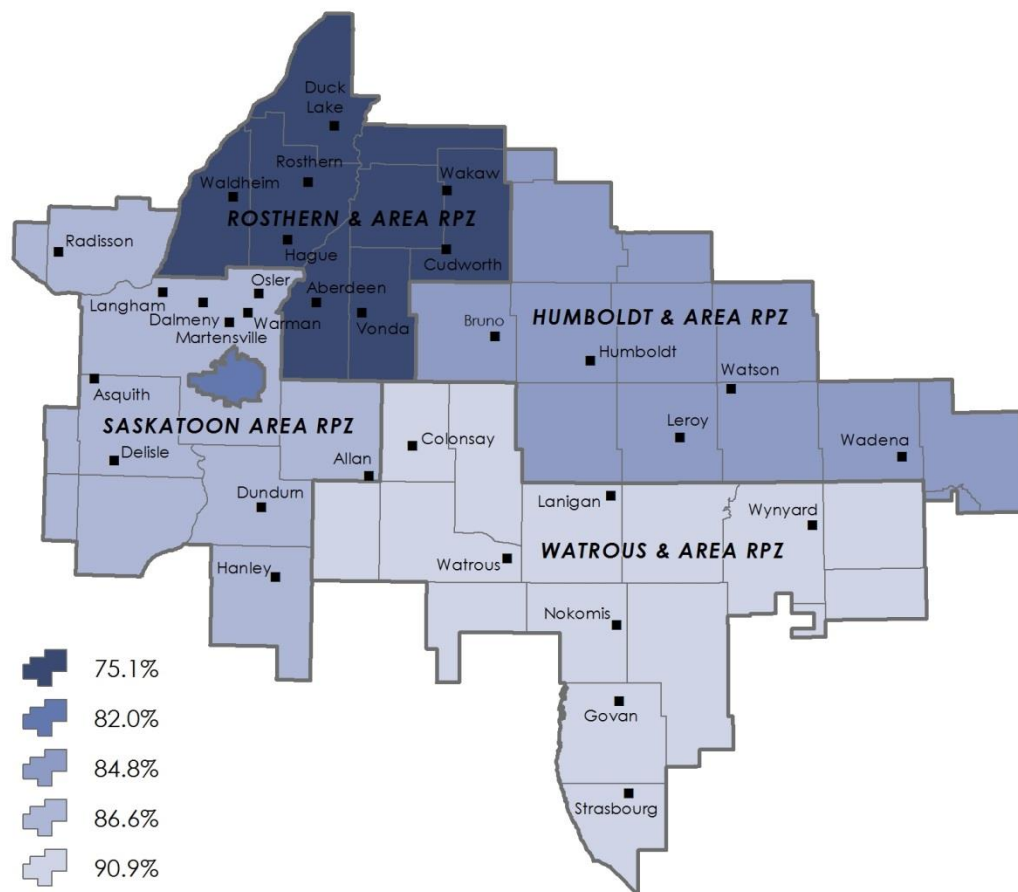

Table 1: Fifteen-year-old Pertussis Booster (1 dose) Coverage Percent by Rural Planning Zone Compared to City of Saskatoon, Saskatoon Health Region, 2011 to 2015

Rural Planning Zone	2011	2012	2013	2014	2015
City of Saskatoon	89.2	89.0	90.2	87.2	82.0
Humboldt and area	91.1	95.1	92.5	90.4	84.8
Rosthern and area	74.8	77.6	72.2	75.8	75.1
Saskatoon area	91.6	93.7	93.0	90.2	86.6
Watrous and area	88.7	90.0	90.0	88.7	90.9
