

Seven-year-old Measles (2 doses) Coverage by Rural Planning Zone (RPZ)

Highlights

- Measles coverage in 2016 varied by rural planning zone (RPZ) (Figure 1).
- Rosthern and Area had the lowest seven-year-old measles coverage, at 86.2%, which was a four percent increase from last year. This rate may underestimate the coverage among children living on First Nations Reserves. See [About the Data](#). For coverage on First Nations Reserves contact [First Nations and Inuit Health](#).
- Watrous and Area had the highest coverage at 94.7%.
- Table 1 shows the historical trend for measles coverage at 7 years by RPZ. Saskatoon and rural Saskatoon decreased in coverage over the previous four years.
