

Fifteen-year-old Pertussis Booster (1 dose) Coverage by Rural Planning Zone (RPZ)

Highlights

- Pertussis coverage in 2016 varied by rural planning zone (RPZ) (Figure 1).
- Rosthern and Area had the lowest pertussis booster coverage at 75.6%. This coverage may underestimate coverage of children on First Nations Reserves. See [About the Data](#). For coverage rates on First Nations Reserves see [First Nations and Inuit Health](#).
- Saskatoon Rural Area had the highest coverage at 87.4%.
- Table 1 shows the historical trend for pertussis booster coverage at 15 years by RPZ.
