

Low Income and Financial Difficulty Additional Data

Highlights

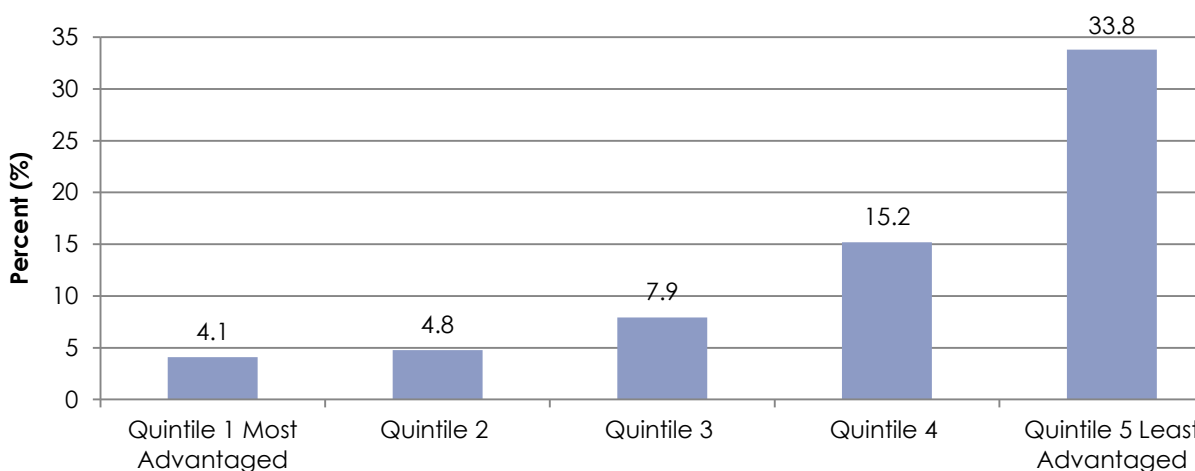

- The proportion of mothers reporting financial difficulty was more common for those living in Rosthern and area (15.8%) compared to other parts of the Region (Figure 1).
- A higher proportion of mothers living in the least advantaged areas of Saskatoon reported financial difficulties (33.8%) compared to those living in the most advantaged areas in 2016 (4.1%; Figure 2).
- About one in seven adult females (12,645 or 12.8%) in the Saskatoon Health Region lived in low income in 2011 (Figure 3). This was slightly higher than the percentage of males that were in low income in the Region. Provincial and national figures are provided for comparison. The adult female numbers are similar to those found for mothers reporting financial difficulty (10.6%).
- Households with children less than 6 years old are also affected by low income in the Region. Click [here](#) to find out more.
