

Hepatitis C by Gender and Age Group Saskatoon Health Region, 2012 to 2016

Highlights

- The highest rate in females was among 20 to 24 year olds (Figure 1); the highest rate in male was among 30 to 39 year olds (Figure 2).
- Hepatitis C rates have decreased in the Region in the past 10 years in both men and women (Figure 3).
- The female rate in 2016 was 35 per 100,000 and the male rate 51.1 per 100,000 (Figure 3).
- The increase in the rate among males in 2008 reflects an outbreak of acute hepatitis C (Figure 3).
- The number of hepatitis C cases in 2016 was 155, with 92 cases in males and 63 cases in females (Figure 4).
