

# Better Health for All

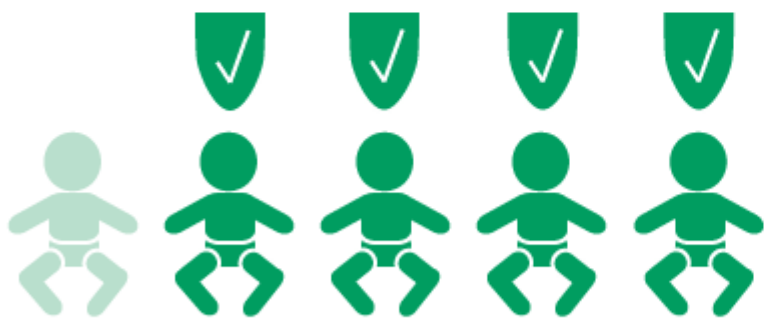

## Child and Youth Immunization

Here is a snapshot of the immunization status of people living in our Region. Ideally, everyone in our community would be protected from vaccine-preventable diseases.

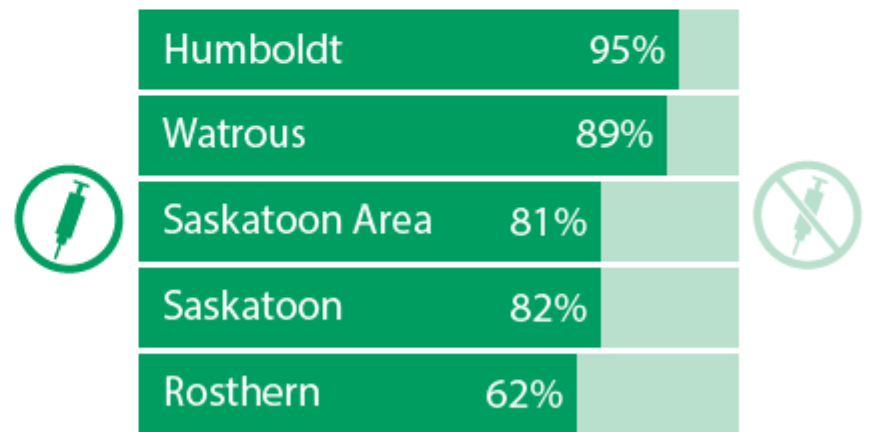

### Early Childhood Immunization

"Done by Two" - complete immunization requires 5 visits over a child's first 2 years.

Approximately one in five two-year-olds in our Region is not "Done by Two."

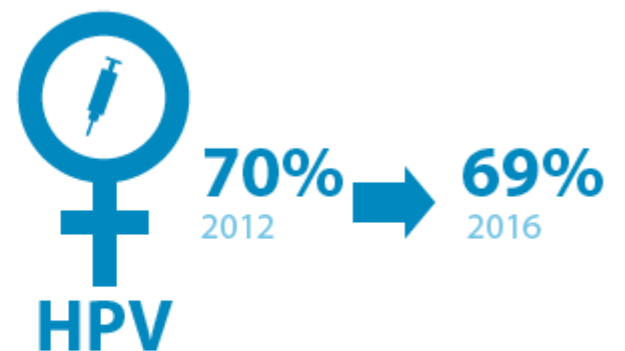

Two year old measles coverage varies by geographic area.

### School Age Immunization

89% of children entering school in our Region are immunized against measles.

HPV vaccination for fourteen-year-olds has decreased slightly.
